

The mobile application for hazardous areas with concentration of incidents in Byala municipality was implemented under Contract No. D-49 / 05.02.2019 with the Contracting Authority - Byala Municipality, Ruse Region. It is part of an integrated information system for street safety measures under the B- TEN - Improved Nodes Giurgiu-Byala for Better Connection to TEN-T Infrastructure project, funded under the Romania-Bulgaria Interreg VA program and national co-financing.

Its purpose is to provide useful information about the historical accumulation of road accidents on municipal roads that over time have formed locations (zones) that are particularly dangerous and for which the application alerts participants in the approaching traffic in such areas.

Using it, you can report a new road accident if you witness one, with just a few clicks. You should keep in mind that this reporting does not replace the 112 phone call, so it is important to remember that you must first call 112 and then, if you wish, report incident information through this app.
