

About the project

The mobile application is part of an integrated information system for street safety measures under the B- TEN - Improved Nodes Giurgiu-Byala for better connection to TEN-T Infrastructure project funded by the Interreg VA program Romania-Bulgaria and national co-financing.

The project aims to improve and restore the transport and performance of a street network in the town of Byala, which ensures the connection of the city with the first- class road I-5, which is an important transport artery and a section of the European transport corridor No9. The development should bring part of the Byala city street network / with an approximate total length of 4.8km / in the necessary operational condition for carrying out road traffic and pedestrian traffic under maximum conditions of safety and comfort.
